

Panels: is python library that is used for ML & data analysis to structures the data, Functions and method.

here we use ^(rows, columns) ~~Data~~ frames is the way the data would struct it's more flexible than the ~~use~~ standard array and have more functions to use. ~~plus~~ way faster

I feel I'm dealing with Seq.

add ~~→~~ append groupby same concept

delete ~~→~~ drop also sorting cluster

edit ~~→~~ replace, map

you can search for data easier here

by : loc , iloc

and also filter the data by conditions
on Columns you need

i don't find things to summary
