Groupby

When should you use Groupby?

When you want to analyze some panda series

by some Category. "for each"

Agg ⟹ allow us to specify multiple

aggregation functions at once.

ex: function-name . agg (["sum", 'min', 'mea'])

---

bonus : % matplotlib inline

_____. plot (kind = 'bar')

will show the information as Shapes

Work with Dates and time

str ⇒ Date_time ⟹ pd. to_ Datetime

format = '%Y - %m - %d %I - %p'

↘ the
format

in lambda :

lambda x : pd. datetime. strptime (x,)

---

there's nothing else i can say :)
